

TABLE OF CONTENTS

DISCRETE PROBABILITY

CHAPTER 1 BASIC PROBABILITY
1.1 probability spaces
1.2 counting techniques
1.3 counting techniques continued
1.4 ors
1.5 at leasts
review of graphing inequalities
1.6 continuous uniform distributions

CHAPTER 2 INDEPENDENT TRIALS AND 2-STAGE EXPERIMENTS
2.1 conditional probability
2.2 ands
2.3 the binomial and multinomial distributions
2.4 the theorem of total probability and Bayes' theorem
2.5 the Poisson distribution
review problems for Chapters 1, 2

CHAPTER 3 EXPECTATION
3.1 expected value of a random variable
3.2 the method of indicators (and some famous expectations)
3.3 conditional expectation and the theorem of total expectation
review problems for Chapter 3

CONTINUOUS PROBABILITY

CHAPTER 4 CONTINUOUS RANDOM VARIABLES
4.1 density functions
4.2 distribution functions
4.3 the Poisson process and the exponential distribution
4.4 the normal (Gaussian) distribution
4.5 when a new random variable is a combination of an old random variable I
4.6 when a new random variable is a combination of an old random variable II
4.7 simulating a random variable
review problems for Chapter 4

CHAPTER 5 JOINTLY DISTRIBUTED RANDOM VARIABLES
review of double integrals
5.1 joint densities
5.2 when a new random variable is a combination of several old random variables
5.3 sums of some independent random variables
review problems for Chapter 5

CHAPTER 6 EXPECTATION
6.1 expectation of a random variable
6.2 variance

CHAPTER 7 CONDITIONAL PROBABILITY AND CONDITIONAL EXPECTATION
7.1 marginal densities
7.2 conditional densities
7.3 two-stage experiments and the theorems of total prob and total exp
summary
review problems for Chapters 6 and 7
more summary
review problems for Chapters 4-7

CHAPTER 8 LIMIT THEOREMS
8.1 the central limit theorem
8.2 the weak law of large numbers
