

Illinois Number Theory Fest

May 16–20, 2007

University of Illinois
at Urbana-Champaign

Index of Talks

Index of Talks

- Krishnaswami Alladi** (Univ. of Florida) May 16, 3:30–3:50, 314 Altgeld
A multi-dimensional extension of an identity of Sylvester.
- George E. Andrews** (Penn State Univ.) May 17, 9:00–9:40, 314 Altgeld
The number of smallest parts in the partitions of n .
- Stephan Baier** (Intern. Univ. Bremen) May 17, 4:30–4:50, 245 Altgeld
The Sato-Tate and Lang-Trotter conjectures about elliptic curves on average.
- Daniel J. Bernstein** (Univ. of Illinois at Chicago) ... May 18, 2:30–3:10, 314 Altgeld
Distinguishing prime numbers from composite numbers: the state of the art.
- Douglas Bowman** (Northern Illinois Univ.) May 20, 3:00–3:20, 245 Altgeld
Asymptotics and sequential closures for infinite products and continued fractions.
- Matthew Boylan** (Univ. of South Carolina) May 18, 3:30–3:50, 314 Altgeld
Coefficients of weakly holomorphic modular forms.
- Kathrin Bringmann** (Univ. of Wisconsin) May 17, 11:50–12:30, 314 Altgeld
Mock theta functions, weak Maass forms, and applications.
- Ben Brubaker** (MIT) May 16, 9:50–10:30, 314 Altgeld
Combinatorial representation theory meets automorphic forms.
- O-Yeat Chan** (Dalhousie Univ.) May 19, 4:00–4:20, 245 Altgeld
Calculating Bessel functions via the \exp -arc method.
- Tsz Ho Chan** (Univ. of Memphis) May 19, 3:30–3:50, 106B1 Engr. Hall
Approximating reals by sums of rationals.
- William Chen** (Macquarie Univ.) May 18, 3:30–3:50, 245 Altgeld
Deterministic and probabilistic discrepancy.
- Alina Carmen Cojocaru** (Univ. of Illinois at Chicago) May 16, 2:30–3:10, 314
Altgeld
Twin prime questions for elliptic curves.
- Brian Conrey** (American Inst. of Math.) May 18, 11:50–12:30, 314 Altgeld
42.
- Jean-Marc Deshouillers** (Univ. of Bordeaux) May 19, 9:00–9:40, 314 Altgeld
Large sumfree-sets: where harmonic analysis and combinatorics rescue number theory.
- Atul A. Dixit** (UIUC) May 19, 5:00–5:20, 245 Altgeld
Generalizing theorems of Ramanujan, Koshliakov and Guinand for even, periodic and completely multiplicative sequences.

- Darrin Doud** (Brigham Young Univ.) May 17, 3:30–3:50, 245 Altgeld
Galois representations and arithmetic cohomology.
- E. Duenez** (Univ. of Texas at San Antonio) May 16, 5:00–5:20, 106B1 Engr. Hall
Repulsion of low zeros in families of elliptic curves.
- P.D.T.A. Elliott** (Univ. of Colorado) May 18, 9:00–9:40, 314 Altgeld
The value distribution of additive arithmetic functions on a line.
- Thomas J. Engelsma** (Operational Techniques Inc.) May 19, 4:00–4:20, 106B1 Engr. Hall
How many primes can exist among 3159 consecutive integers?.
- Michael Filaseta** (Univ. of South Carolina) May 19, 11:50–12:30, 314 Altgeld
Irreducibility and gcd algorithms for sparse polynomials.
- Carrie E. Finch** (Columbia College) May 19, 4:30–4:50, 314 Altgeld
Sequences of polynomials with exponents in arithmetic progression.
- Amanda Folsom** (Univ. of Wisconsin) May 16, 4:30–4:50, 314 Altgeld
Duality involving the mock theta function $f(q)$.
- Kevin Ford** (UIUC) May 19, 11:00–11:40, 314 Altgeld
The Carmichael conjecture centennial.
- John Friedlander** (Univ. of Toronto) May 16, 11:00–11:40, 314 Altgeld
Hyperbolic prime number theorem.
- Lenny Fukshansky** (Texas A&M Univ.) May 18, 5:00–5:20, 245 Altgeld
On the distribution of integral well-rounded lattices in dimension two.
- Jenny G. Fuselier** (Texas A&M Univ.) May 16, 5:30–5:50, 314 Altgeld
Hypergeometric functions over \mathbb{F}_p and Ramanujan's τ -function.
- William F. Galway** (UIUC) May 20, 11:30–11:50, 314 Altgeld
A package for the computation of sieve functions.
- Satadal Ganguly** (Inst. of Math. Sci. Chennai) May 18, 5:00–5:20, 314 Altgeld
Large sieve inequalities and counting modular forms of weight one.
- Frank Garvan** (Univ. of Florida) May 17, 3:30–3:50, 314 Altgeld
Congruences for Andrews' smallest parts partition function.
- John Garza** (Univ. of Texas) May 17, 4:00–4:20, 245 Altgeld
The Weil height of the centralizer of complex conjugation.
- Sergey V. Gassan** (Russian Acad. of Sci.) May 20, 4:00–4:20, 314 Altgeld
Vahlen's theorem for three-dimensional lattices.
- Jason Gibson** (Eastern Kentucky Univ.) May 20, 12:00–12:20, 245 Altgeld
Covering systems with large least modulus.

- Daniel Goldston** (San Jose State Univ.) May 18, 9:50–10:30, 314 Altgeld
Small gaps between primes.
- Sidney W. Graham** (Central Michigan Univ.) May 16, 3:30–3:50, 106B1 Engr. Hall
The ideal sieve.
- Andrew Granville** (Univ. of Montreal) May 16, 11:50–12:30, 314 Altgeld
Pretentiousness in the distribution of prime numbers.
- Pavel Guerzhoy** (Univ. of Hawaii at Manoa) May 20, 3:30–3:50, 245 Altgeld
On a conjecture of Atkin.
- William Hart** (Univ. of Warwick) May 20, 12:00–12:20, 314 Altgeld
A new C library for number theory.
- Alan K. Haynes** (Univ. of Texas) May 18, 4:30–4:50, 245 Altgeld
Applications of martingale maximal inequalities to metric number theory.
- Joshua Holden** (Rose-Hulman Inst. Tech.) May 20, 2:30–2:50, 314 Altgeld
Mapping the discrete logarithm.
- Tim Huber** (UIUC) May 20, 2:30–2:50, 245 Altgeld
Ramanujan’s parametric representations for Eisenstein series via a Riccati equation.
- Karl-Heinz Indlekofer** (Univ. of Paderborn) May 16, 4:00–4:20, 245 Altgeld
On an inequality in the convolution arithmetic of number theoretical functions.
- Paul Jenkins** (UCLA) May 18, 4:00–4:20, 314 Altgeld
Coefficients and zeros of certain weakly holomorphic modular forms.
- Nathan Jones** (Univ. of Montreal) May 17, 5:00–5:20, 245 Altgeld
The constants in the Lang-Trotter conjecture.
- Rafe Jones** (Univ. of Wisconsin) May 18, 4:30–4:50, 314 Altgeld
Arboreal Galois representations and abelian algebraic groups.
- Soon-Yi Kang** (Korea Inst. for Adv. Study) May 17, 5:30–5:50, 314 Altgeld
Partitions weighted by the parity of the crank.
- Sun Kim** (UIUC) May 20, 11:30–11:50, 245 Altgeld
Covering systems in number fields.
- Michael Knapp** (Loyola College) May 18, 3:30–3:50, 106B1 Engr. Hall
Systems of diagonal forms over p -adic fields.
- Louis W. Kolitsch** (Univ. of Tennessee at Martin) .. May 17, 4:00–4:20, 314 Altgeld
Some observations about the reciprocal of the generating function for p -regular partitions.

- Mihail N. Kolountzakis** (Univ. of Crete) May 18, 4:00–4:20, 245 Altgeld
Covering the plane by rotations of a lattice arrangement of disks.
- Mark Kozek** (Univ. of South Carolina) May 19, 5:00–5:20, 314 Altgeld
On composite numbers that remain composite after any insertion of a digit and similar results.
- Youness Lamzouri** (Univ. of Montreal) May 16, 4:00–4:20, 106B1 Engr. Hall
The distribution of values of $\zeta(1+it)$ and $L(1, \chi)$.
- James Mc Laughlin** (West Chester Univ.) May 17, 5:00–5:20, 314 Altgeld
Some variations of the Bailey transform.
- Sung-Geun Lim** (UIUC) May 18, 5:30–5:50, 314 Altgeld
New proofs of modular transformation formulas and a class of infinite series from the generalized Eisenstein series.
- Lutz G. Lucht** (Univ. of Clausthal) May 16, 3:30–3:50, 245 Altgeld
Solutions to arithmetic convolution equations.
- Karl Mahlburg** (MIT) May 17, 2:30–3:10, 314 Altgeld
Maass forms and generalizations of Dyson’s rank.
- Frantisek Marko** (Penn State Univ. Hazleton) May 17, 5:30–5:50, 245 Altgeld
Sums of high powers of roots of a certain polynomial modulo p^3 .
- Greg Martin** (Univ. of British Columbia) May 16, 5:00–5:20, 245 Altgeld
The normal order of iterates of the Carmichael λ -function.
- Jeff Meyer** (Syracuse Univ.) May 16, 4:00–4:20, 314 Altgeld
A generalization of an integral of Ramanujan.
- Micah B. Milinovich** (Univ. of Rochester) May 17, 4:00–4:20, 106B1 Engr. Hall
Upper bounds for discrete moments of the Riemann zeta-function and its derivative.
- Mojtaba Moniri** (Tarbiat Modarres Univ.) May 20, 3:30–3:50, 314 Altgeld
Sequences which are only locally Beatty.
- M. Ram Murty** (Queen’s Univ.) May 17, 11:00–11:40, 314 Altgeld
Variants of the Lang-Trotter conjecture.
- Saradha Natarajan** (Tata Inst.) May 17, 4:30–4:50, 106B1 Engr. Hall
Arithmetic progressions with common difference divisible by small primes.
- Pace P. Nielsen** (Univ. of Iowa) May 19, 4:00–4:20, 314 Altgeld
An old problem in number theory: odd perfect numbers.
- Kevin O’Bryant** (CUNY–Staten Island) May 19, 3:30–3:50, 314 Altgeld
Many sets have more sums than differences.

- Benjamin E. Odgers** (American Inst. of Math.) ... May 16, 5:30–5:50, 106B1 Engr. Hall
Random matrices and L -functions: transitions between ensembles.
- Ken Ono** (Univ. of Wisconsin) May 16, 9:00–9:40, 314 Altgeld
Eulerian series as modular forms.
- Scott Parsell** (Butler Univ.) May 18, 4:00–4:20, 106B1 Engr. Hall
Exceptional sets for diophantine inequalities.
- Carl Pomerance** (Dartmouth College) May 19, 9:50–10:30, 314 Altgeld
Covering, sieving, matching, and counting with Selfridge.
- Stefan Porubsky** (Czech Acad. of Sci.) May 20, 11:00–11:20, 245 Altgeld
Generalized primitive sequences.
- Wissam Raji** (Temple Univ.) May 16, 4:30–4:50, 245 Altgeld
Eichler cohomology and generalized modular forms.
- Michael Rowell** (Penn State Univ.) May 16, 5:00–5:20, 314 Altgeld
A new exploration of the Lebesgue identity.
- James Sellers** (Penn State Univ.) May 17, 4:30–4:50, 314 Altgeld
Parity results for broken k -diamond partitions.
- Jaebum Sohn** (Yonsei Univ.) May 19, 3:30–3:50, 245 Altgeld
Koshliakov's formula and Guinand's formula in Ramanujan's lost notebook.
- K. Soundararajan** (Stanford Univ.) May 18, 11:00–11:40, 314 Altgeld
Moments of zeta and L -functions.
- Kenneth B. Stolarsky** (UIUC) May 20, 3:00–3:20, 314 Altgeld
Polynomials of Chebyshev type and their resultants.
- Frank Thorne** (Univ. of Wisconsin) May 16, 4:30–4:50, 106B1 Engr. Hall
Bounded gaps between products of primes with applications to elliptic curves and ideal class groups.
- Alain Togbe** (Purdue Univ. North Central) May 18, 5:00–5:20, 106B1 Engr. Hall
A parametric family of sextic Thue equations.
- Pee Choon Toh** (National Univ. of Singapore) May 19, 4:30–4:50, 245 Altgeld
Ramanujan's Eisenstein series and powers of Dedekind's eta function.
- Slobodan B. Trickovic** (Univ. of Nis) May 19, 4:30–4:50, 106B1 Engr. Hall
Zeta function and series involving trigonometric functions.
- Kai-Man Tsang** (Univ. of Hong Kong) May 17, 3:30–3:50, 106B1 Engr. Hall
Error term in the mean square of Dirichlet's L -functions.

- Robert Vaughan** (Penn State Univ.) May 20, 9:00–9:40, 314 Altgeld
Diophantine approximation on planar curves: the convergence theory.
- Sam Wagstaff** (Purdue Univ.) May 20, 11:00–11:20, 314 Altgeld
Square form factorization.
- H. Williams** (Univ. of Calgary) May 19, 2:30–3:10, 314 Altgeld
Pseudopower and primality proving.
- Ae Ja Yee** (Penn State Univ.) May 17, 9:50–10:30, 314 Altgeld
Lecture hall partitions.
- Hisashi Yokota** (Shibaura Inst. of Tech.) May 18, 4:30–4:50, 106B1 Engr. Hall
Polynomial Pell's equation.
- Gang Yu** (Kent State Univ.) May 17, 5:30–5:50, 106B1 Engr. Hall
An application of Fourier series to some order 2-additive problems.
- Alexandru Zaharescu** (UIUC) May 20, 9:50–10:30, 314 Altgeld
Siegel's trace problem in abelian fields.
- Wen-Bin Zhang** (Univ. of the West Indies) May 16, 5:30–5:50, 245 Altgeld
Beurling primes with RH and Beurling primes with large oscillation.
- Liangyi Zhao** (Royal Inst. of Technology) May 17, 5:00–5:20, 106B1 Engr. Hall
On primes in quadratic progressions.
