

Math 341 Computer Lab - IODE Installation

You will need to download IODE in order to run it on your math account. To do this you should first create a directory. To create a directory called IODE you should use the unix command “mkdir”

```
mkdir IODE
```

Next change to this directory, and run netscape

```
cd IODE  
netscape &
```

From netscape go to the iode home page, <http://www.math.uiuc.edu/iode/> and click the appropriate links to download iode. If you started netscape from the IODE directory then it will be downloaded into that directory by default. The filename should be *iode.zip*

Finally from the unix prompt you need to run the unzip utility, which unpacks a number of files which have been bundled together into *iode.zip*

```
unzip iode
```

Now you should be ready to run.
